INFORMATION LETTER 407-06-88

TO: All Owners/Operators of Bell 407 series Helicopters

SUBJECT: RADS SCRIPT FILES v7.31, INTRODUCTION OF

This Information letter is issued to notify Bell 407 operators of an upgrade to the M407 v7.30 Script Files. The improvement has been carried out to correct the initial product balance (INT_PB) flight plan, which was providing erratic corrections.

The new Version 7.31 replaces the M407 v7.10 file as well as M407 v7.30 for aircraft setup. This software includes all the functions that are necessary to control the main rotor 1/rev, tail rotor 1/rev and to troubleshoot the vibrations. For information regarding oil cooler and flywheel balance, you will still require M407ds v701.

The new file is available for download at www.bellcustomer.com
